

At a Glance: CloudLock, the cloud-native Cloud Access Security Broker (CASB) and Cybersecurity-as-a-Service solution, integrates with OneLogin, the cloud-based Identity and Access Management Platform, to help enterprises manage all identities that touch corporate data and protect organizations from threats and cloud malware across users, accounts, and applications.

Key Benefits

- Enhance threat mitigation capabilities with automated incident response
- Defend against account compromises
- Enforce internal and external security and compliance requirements and best practices
- Confidently expand use of OneLogin to critical apps
- Enhance security while having zero impact on end users
- Integrate in minutes through CloudLock's pure API approach

Key Features

- Cross-Platform User and Entity Behavior Analytics (UEBA)
- Enforce Multi-Factor Authentication and Security Best Practices
- User Location Whitelisting
- Privileged User Monitoring
- Apps Firewall
- Policy Automation
- Central Auditing
- Incident Management

Business Challenges

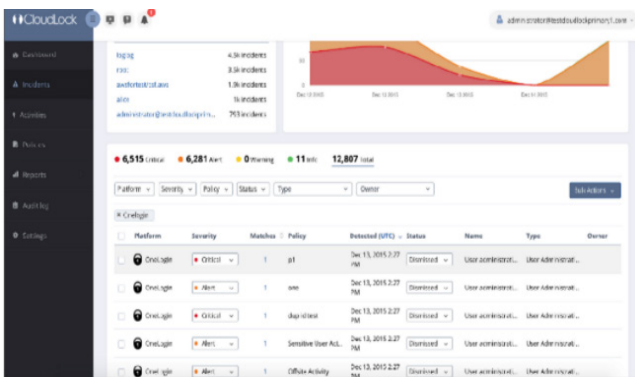

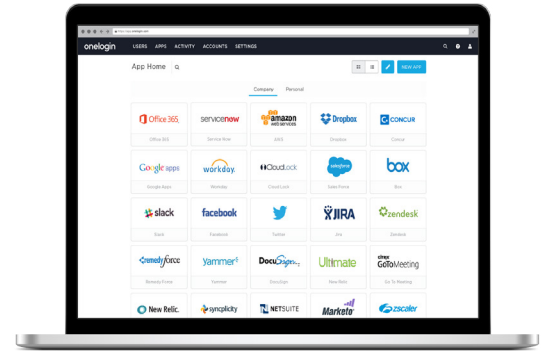

- 1 While many enterprises have made substantial investments in security solutions, a lack of integration and interoperability bars organizations from gaining the full value of the available insights. As security intelligence is fragmented across multiple solutions, security teams find themselves at a disadvantage, unable to efficiently and effectively correlate information and remediate risk across infrastructure to combat the contemporary threat landscape.
- 2 As Identity-as-a-Service (IDaaS) solutions are used to control access to critical applications containing sensitive information, protecting the integrity of IDaaS accounts is essential. If an identity used for Single Sign-On (SSO) is compromised, the attacker can use that identity to access numerous applications and - in the case of privileged account compromise - change the access controls for the entire organization.

Solution Overview

- 1 **CloudLock and OneLogin: Orchestrated Cybersecurity**
For security teams that need to combat complex cyberthreats, OneLogin and the CloudLock Cybersecurity Orchestrator join forces through an API-driven solution to aggregate data feeds to:
 - Enrich security intelligence
 - Improve incident detection
 - Harmonize data protection across on-premises and cloud environments for unprecedented insight and control
- 2 **CloudLock CASB for OneLogin**
CloudLock for OneLogin is a cloud-native CASB and Cloud Cybersecurity Platform to protect the OneLogin environment from account compromise and enable organizations to confidently expand the use of OneLogin to the most sensitive applications.

OneLogin: The Secure Approach for the Modern Enterprise

- **Secure Access to On- and Off- Premises Applications:** Enable employees to access thousands of policy compliant applications and enforce access controls across applications, users, and devices, regardless of location
- **Enforce Security Policies:** Restrict app access by IP address and enforce multi-factor authentication for increased security
- **Mitigate Risk:** Instant lock down and notifications of all identity and access changes/breaches
- **Simplify Compliance Reporting:** Easy one-click reports for auditors detailing who had access to what applications and when

CloudLock: CASB For OneLogin

- Correlate OneLogin user behavior with user activity in other cloud platforms to identify potential account compromise
- Combat data breaches with advanced user and entity behavior analytics
- Confidently expand the use of OneLogin to the most sensitive applications

CloudLock and OneLogin: Orchestrated Cybersecurity

- Analyze user and entity behavior to detect anomalous activity indicative of account compromise
- Automate dynamic user classification within OneLogin as a response action to policy violation within CloudLock
- Attain identity assurance by automating group-based security enforcement capabilities within OneLogin to enforce multi-factor authentication and security best practices

About CloudLock

CloudLock is the cloud-native CASB and Cloud Cybersecurity Platform that helps organizations securely leverage cloud apps they buy and build. CloudLock is installed in minutes in any organization and supports any app on IaaS, PaaS, and IDaaS, without requiring any code, and without any change to app configurations and the user experience. Founded by Israeli Elite CyberSec Military Intelligence experts, the company delivers actionable cybersecurity intelligence through its data scientist-led CyberLab, advanced machine learning and crowd-sourced security analytics across billions of data points daily. CloudLock has been recognized by Inc. Magazine as the fastest growing security product company in the U.S. and by Glassdoor as one of the best places to work for in the country. About OneLogin

OneLogin brings speed and integrity to the modern enterprise with an award-winning SSO and identity management platform. Our portfolio of solutions secure connections across all users, all devices, and every application, helping enterprises drive new levels of business integrity and operational velocity across their entire app portfolios. The choice for innovators of all sizes such as Condé Nast, Pinterest and Steelcase, OneLogin manages and secures millions of identities across more than 200 countries around the globe. We are headquartered in San Francisco, California. For more information, visit www.onelogin.com.
