

OneLogin Directory Integrations for Workflow Automation

Build identity automation across your systems and applications

Many IT teams struggle with ensuring different applications and services work together seamlessly, especially as an organization grows, scales, and adds new technologies. Enterprises often rely on multiple systems of record for identities, such as Active Directory or LDAP and Human Capital Management (HCM) software. Without proper and timely connectivity, user info is often inaccurate and out of sync across systems. However, relying on manual processes and building custom integrations is time-consuming, expensive to maintain, and not scalable.

OneLogin Directory Integrations

OneLogin's Directory Integrations allows organizations to build workflows between OneLogin's unified cloud directory and other applications that require identity information. Synchronize employee records from other applications, such as HCM platforms, to OneLogin to fully automate end-to-end user lifecycle management. Manage users, authentication policies and access control from a single, intuitive web portal. Employees gain quick and secure access to the applications they need from a centralized access portal.

Key benefits of OneLogin Directory Integrations

Synchronize clean data across multiple directories

Large organizations often have several FTEs to manage manual user syncs between their HR platforms and additional user directories, such as Active Directory and LDAP. Avoid troublesome integration projects and quickly sync clean user data across HCM and other user directories with OneLogin's unified cloud directory.

Enhance the user experience from day one

Employees require access to a large number of cloud applications from any location across a range of devices. Give end-users quick, secure access to critical systems using Single Sign-On (SSO) to simplify authentication to business-critical apps every day.

Accelerate onboarding & offboarding processes

For most organizations, onboarding and offboarding is resource-intensive and expensive. Manual processes are not secure and leave windows of time for terminated users to still have lingering access to sensitive applications. Improve IT team efficiency and substantially reduce tactical workload through automated identity workflows that scale as your business grows.

Protect user data effectively

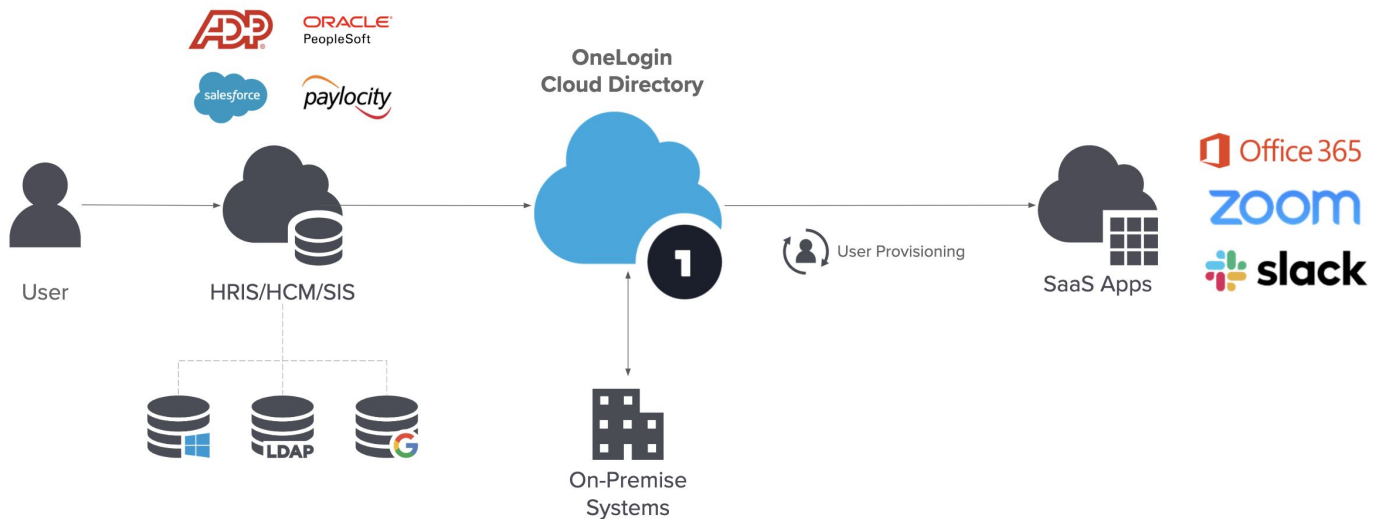

HCM software handles a wide range of sensitive data, including Personally Identifiable Information (PII), financials, and strategic planning data. Data protection is critical to preserving a secure and compliant institution. As a security-first company, data and privacy protection are our #1 priority.

EU-U.S. Privacy Shield

"Unifying the HR directories into IT has definitely helped us drive efficiency. With OneLogin, we're maximizing the use of Workday as our single source of truth for all corporate user provisioning as a mechanism to ensure data consistency and security."

How does OneLogin Directory Integrations work?

OneLogin Directory Integrations functionality includes:

- **Workflow builder**

OneLogin's purpose-built platform eliminates the need for custom integrations and seamlessly syncs identities across your organization's applications. Build additional automation and workflows to meet your business needs.

- **Unified cloud directory**

Synchronize user information between AD, LDAP, Google, and HCM platforms to OneLogin's Cloud Directory. OneLogin's provisioning engine makes it possible to automatically create, update, delete, and suspend user accounts in real-time across applications. Make onboarding and offboarding more efficient and operate in real-time to suspend or delete accounts.

- **Automated new user record mapping into existing directories**

Once personnel create a new user record, OneLogin maps the user record information to an existing organizational unit within the network. Custom user fields are synchronized with other apps and directories in real-time to improve automation and maximize productivity and security.

- **Automated user provisioning and access**

Eliminate unnecessary time and effort required to activate and deactivate profiles across multiple user management systems. Instantly grant and revoke user access to applications based on real-time user status and customized security policies defined in OneLogin.
