Access Management (AM) is a foundational technology for cloud, security and end user productivity.

**Overview**

Innovative Access Management that makes your customers’ lives easier.

Enable your customers and their employees, customers and partners with secure access to cloud and company apps on any device.

OneLogin access management provides secure single sign-on (SSO), multi-factor authentication (MFA), directory integration with AD LDAP and other external directories, user provisioning, endpoint management and more.

Benefits the OneLogin solution can provide to your customers:

1. **Improve your operational efficiencies**
   - Reduce your help desk / service desk ticket volume up to 50% with self service password reset.
   - Automated user provisioning into 100’s of apps like O365, G-Suite, Salesforce, Box, Dropbox, RingCentral, Zoom, etc. and on average save 3-5 minutes per person per app.

2. **Strengthen security**
   - OneLogin with SAML SSO can eliminate 100s, 1,000s even 10,000s of passwords.
   - When combined with MFA, dramatically reduces the threat of password-related breaches which cause an est. 81% of breaches.
     - See up to an 80% reduction in high risk passwords w/ SAML SSO.

3. **Improve customer satisfaction = higher customer retention**
   - When end users have 1 portal to access all of their applications, that simplifies IT and lowers frustration with technology which can greatly improve customer satisfaction and productivity.

4. **Differentiate your service offering**
   - Help your customers be more productive, adopt cloud solutions, meet compliance and regulatory needs while also becoming more agile and secure vs. a cost center.

OneLogin is a broad-based solution with robust capabilities allowing you and your team to do more with less

- Self service password reset for Active Directory and other directories
- Multi-Factor Authentication (MFA)
- Single Sign-On (SSO) and a single pane of glass for easy application access
- Password management and vaulting for browser / forms based authentication
- Automated user provisioning and account creation in 100’s of applications
- App Catalog with 6,000+/- pre-built connectors
- Role-based Access Control for granular security
- Reporting capabilities for PCI, HIPPA and other compliance needs
- SIEM integration allowing deeper + richer security insights for your MSSP offering
- Desktop Single Sign-On
- Unified Cloud Directory - sync multiple directories for a single source of truth
- Secure Notes
- Cloud RADIUS unifies access to wifi + VPN appliances like Meraki, SonicWall, Aruba and more
- vLDAP
- OneLogin Desktop - a device level certificate for non-domain join machines to ensure password compliances
- Adaptive Authentication
