

OneLogin Multi-Tenant Capabilities

Secure and protect you and your tenants with one, simple administrator interface

Managing identity can be challenging and complex, especially when an organization is responsible for managing the identities of subsidiaries, customers, partners, vendors, or sub-brands - also known as “tenants.” In today’s digital landscape, organizations need an identity and access management platform that can support managing multiple organizations or tenants remotely through a “single pane of glass.”

Multi-tenancy enables tenants to operate autonomously from each other, with different configurations, policies and users, while still sharing the same applications and OneLogin instance. This enables organizations to maintain one infrastructure, while still keeping their tenant’s data and business logic separate and secure.

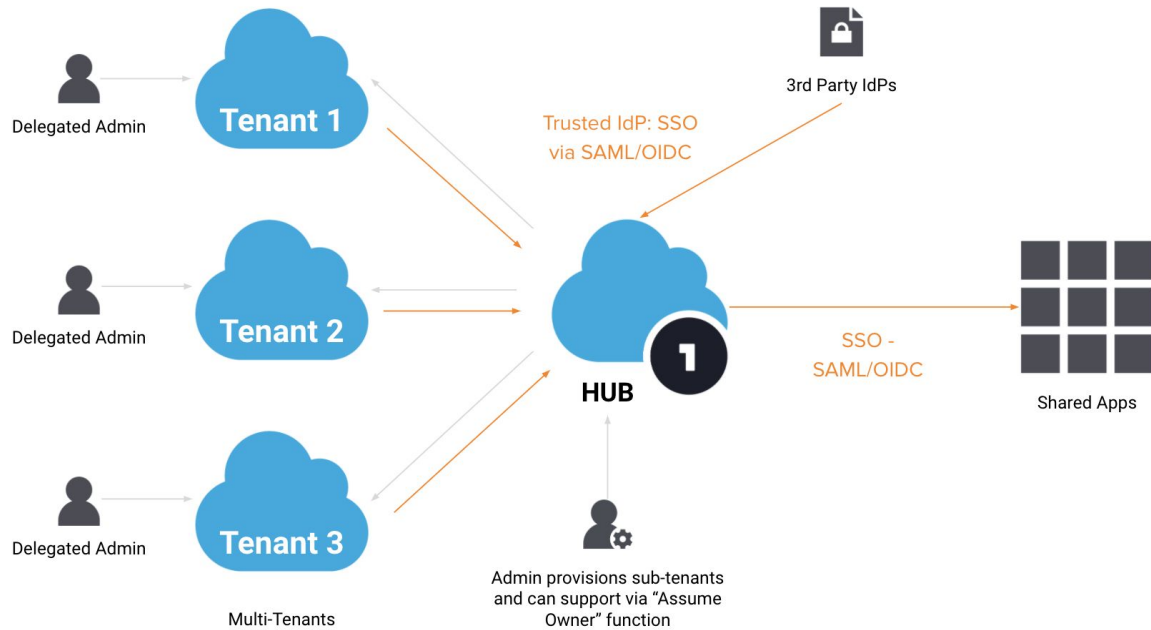

Key Benefits of a Multi-Tenancy IAM Solution

- Trusted Identity Provider**
 Configure multiple identity providers to securely sign users into OneLogin and downstream applications using their own corporate or social credentials
- Enable Tenants To Manage Their Own Environments**
 Enable partners, vendors, or subsidiaries to manage their own environments, while the parent maintains the top-level tenant
- Lower Costs of Maintaining Multiple Servers & Infrastructures**
 Reduce the costs of provisioning and managing software and infrastructure across the multi-tenant environment
- Customized Branding & Subdomain**
 Enable tenants to use their own branding and subdomain within their own tenant to maintain consistency across the brand, simplifying the user experience
- API Integration Scalability**
 Utilize OneLogin’s APIs to easily scale and consolidate user and application management across all tenants
- Instant On-Boarding**
 Easily provision new partners, vendors or subsidiaries in the cloud, without the need for software or server installation

"...since we started working with OneLogin, our IT team’s time spent on service desk tasks has dropped significantly. We are now able to offer self-service facilities across multiple sites, which has greatly improved corporate efficiencies."

JEREMY HYLAND | IT Director, Consort Medical

How Our Multi-Tenant Capabilities Work

Multi-Tenant Capability Features

- **Custom Sub-Domains**
Enable each tenant with the ability to customize their own subdomain to maintain their name brand and serve their specific group of users.
- **Custom Branding**
Give each tenant the ability to customize their OneLogin tenant to reflect the visual personality of their organization and simplify the user experience with custom logo, color scheme, login label, background image and help instructions.
- **Assume Users**
Organizations can setup the ability to assume user privileges to “take control” of users on their tenants to diagnose improper configurations and troubleshoot issues.
- **Delegated Admin**
Utilize this feature to grant granular administrative privileges to users and follow the principle of least privilege ensuring users only have access to the admin functionality necessary for their job function.
