Accelerate Your Cloud-First Strategy with OneLogin for Tempered

When using Tempered's Zero Trust Architecture, Software-Defined Perimeter solution all policy is controlled from a central location in the Airwall Conductor. As a result, securing access and using appropriate role-based access control is important when setting up a production environment. Authentication platforms provide significant value for managing user identities, delivering capabilities like single sign-on and multi-factor authentication (MFA). When companies already have an authentication platform provider or are looking to add MFA support to Tempered's networking security solution integrating these two solutions can often be the best architecture.

Tempered is a leader in **Zero Trust Software Defined Perimeter Networking** for the protection of critical IT and OT assets. Together, OneLogin and Tempered give end-users an experience they love and admins of the Tempered solution the security and control they need.

OneLogin for Tempered Product Highlights

Directory Integration	Single Sign-On (SSO)	User Provisioning	Multi-Factor Authentication

Strengthen Your Identity Strategy With These Benefits

Protect Access to Tempered Airwall

Tempered Airwall creates Zero Trust overlay networks to protect critical (IT and OT) assets. Secure access to the Airwall solution, by allowing admins and end users to use the same master credentials to log into the Airwall Conductor and to access their corporate SaaS applications.

Eliminate Deployment Complexity

Leverage OneLogin's pre-built OIDC-based Tempered Airwall Conductor integration and powerful mappings and rules engine to automate the Airwall deployment process. Spend less time on manual entry.

Decrease IT Operations and Support Costs

Free up IT time and resources with built-in self-service password reset and automated user provisioning and deprovisioning based on user's directory attributes or security groups originating from your corporate directory.

Customize Security Controls

Create and enforce customized security policies such as multi-factor authentication, password complexity, session timeout, and more. Easily map those policies based on user attributes or other identifiers such as IP address.

Advanced Security and Scalability

Rest easy with redundant data centers in the US and Europe, massive scalable infrastructure, quarterly security reviews by iSEC partners, and 247 monitoring. 99.9% Uptime Guarantee.

Over 2,000 enterprise customers globally secure their applications with OneLogin
