

Sapling + OneLogin: Streamlining People Ops and IT through automation + data protection

The OneLogin logo consists of the word "onelogin" in a lowercase, sans-serif font, centered within a light gray circle.

About OneLogin

OneLogin is a cloud-based identity and access management provider that designs, develops, and sells a unified access management system platform to enterprise-level businesses and organizations. www.onelogin.com

About the Integration with Sapling

The Sapling and OneLogin integration allows People Operations and IT teams to streamline handoffs, drive automation + protect employee data.

The integration allows customers to launch Sapling from OneLogin's single sign-on (SSO) portal, sign into Sapling using OneLogin credentials / authentication and automatically provision new hire accounts in OneLogin from your HR data.

How it works?

When new hires are created within applicant tracking system, the information is automatically sent to Sapling to initiate the new hire onboarding event.

People Operations can then enrich the employee profile, and automatically provision the new hires account in OneLogin - with Sapling sending 5 - 15 attributes of employee data to IT team. The attributes include everything from name, email, title, department, phone number and custom fields.

Sapling + OneLogin integration saves People Ops and IT teams time, reduces the risk of manual error, and protects mission critical data.

Leading companies streamlining People Operations and IT with Sapling + OneLogin
